

Smart Repair Centre

ManheimFowles Smart Repair is the name given to a range of modern techniques that allow the repair of much minor damage to vehicles without the need to resort to expensive replacement parts or more costly traditional repair.

Aimed at facilitating all aspects of preparation of vehicles for resale, ManheimFowles Smart Repair Centre© houses many different services. There are six repair areas that make up our SMART Repair Department.

Paintless Dent Removal (PDR)

This is the art of using special tools and rods to “massage” dents out of body panels to restore them to their original condition, without the need to paint the panels.

PDR is suitable for all small dents such as those caused by other car doors, shopping trolleys and even hailstones. It’s the sort of minor damage that can happen at virtually any time to any vehicle.

Chip & Scuff Repairs

Similarly, scuffs and scratches caused in day to day driving can be effectively painted away without the need for replacing and painting body panels in a bodyshop. By using advanced paints and application techniques, small to medium area damage can be effectively painted away.

Exterior Plastic Repair

Now with SMART Repair it is possible to carry out repairs to plastic such as bumpers, mirror casings and spoilers. Employing the art of repair without replacement, we can restore bumpers and other plastic parts to their original condition including recreating the textured finish.

Interior Trim Repair

Cigarette burns, holes from portable phone mountings and general wear and tear to dashboards

and trim panels are typical problems that can be remedied using advanced materials and techniques to reconstruct the damaged areas, even when parts are missing.

Velour Upholstery Repair

Velour upholstery can have a rough life. SMART Repair techniques can make good all kinds of damage providing a near invisible repair that will restore the look of your vehicle’s interior.

Interior Leather Repair

Interior leather gives a real feeling of luxury and quality to a car but over time leather is prone to scuffs, scrapes and even tears. SMART Repair techniques can make good this damage providing a repair that will restore the pleasure of your leather.

The centre has installed a specialised paint system enabling spot repair techniques, all with the goal of providing higher quality, cost effective and timely repairs designed to maximise the value of vehicles.

ManheimFowles will offer the service to all clients through its many remarketing facilities around Australia, New Zealand and Asia.
